

BTIC

For more process reliability.

HIGH TOOL LIFE

PROCESS RELIABLE

COST-EFFECTIVE

NEW COATING

It shimmers in a noble rose gold: the new **BTIC**-coating from BASS.

The efficient coating stands for a strong plus for **process reliability** in internal thread machining.

Applied with an innovative coating process, the BTIC coating is one of the most **modern surface treatments**.

In combination with the coating elements specially selected for thread

machining, BTIC enables a **long tool life** with optimum process reliability.

Due to its strong properties, the coating can be used in a **wide range of applications**.

The new coating is initially only intended for cutting taps and will be available soon.

Further information can be obtained from your contact at BASS.

ADVANTAGES

- » high process reliability
- » even wear
- » long tool life
- » thermal resistance

CHARACTERISTICS

- » excellent coating smoothness
- » consistent coating thickness
- » strong coating adhesion
- » high density
- » high hardness
