

# THROUGH THICK AND THIN

**Blechexpo**  
**Messe Stuttgart**  
26.-29. Oktober 2021  
Halle 4, Stand 4403

**International trade fair  
for sheet metal working.**

**Blechexpo**

## SHEET METAL WORKING

Starting October 26th, there will be everything about sheet metal processing in the exhibition halls in Stuttgart. BASS is exhibiting for the first time and we are looking forward to welcoming you in hall 4 where we will be presenting our products.

Even though **Blechexpo** is a new territory for us, we have felt at home in the sheet metal industry for decades. With our **roll taps** of the DURAMAX family, we offer reliable solutions with a high tool life for the chipless machining of internal threads.

That “**chipless**” is the magic word here, goes without saying for anyone who is familiar with sheet metal working. Production lines neither have the space nor the equipment to remove chips from the components. At the same time, nobody wants

to drag chips from one stroke to the next – let alone carry out a separate cleaning operation.

Our roll taps **DURAMAX N** and **DURAMAX H** with compact lengths for short traverse paths are the perfect solution. Their geometries allow for high stroke rates in a wide range of materials and they are available with connections for any type of machine – whether it is DIN, Trumpf or Amada.

In case you will not be able to visit us at the fair this year, you can still get an overview of our tools with our new leaflet for sheet metal working. We are of course at your disposal for further information and are looking forward to receiving your phone call or e-mail.

### PRODUCTS

- » **DURAMAX N**  
normal to  
medium-hard steels
- » **DURAMAX H**  
medium-hard to  
high-strength steels

### CHARACTERISTICS

- » long tool life
- » high cutting speed
- » process-reliable
- » powerful also in  
copper and brass
- » suitable for MQL
